

OSINT INVESTIGATION: EACC Forensic capabilities

Date: February 3, 2026

Investigator: John Wesley.

1. Objective

To determine the specific software used by the Ethic & Anti Corruptions Commission (EACC) to align my skill set with their operational requirements.

2. Methodology

Tool Used: Google Dorks

Query: site:go.ke filetypes:pdf “forensic” & “ tender” after: 24-01-01.

Source: Retrieved public tender notification dated May 2nd 2025.

3. Findings (Intel)

I located a “ notification of intention of procurement” from the EACC. The documentation explicitly lists requirements for :

Mobile forensics ; “Inseyets Pro UFED” & “ Physical Analyzer”, “Cellebrite inspector” (formerly Black bag) and “ FTK” (Forensics Toolkit)

Advanced capabilities : “Limited unlocks subscription” (Indicating the need to bypass complex encryption on suspect devices).

4. Operational Analysis

The specific requests for MacQuistions/ Inspector indicates then EACC is encountering Apple Devices in investigations, likely associated with high profile suspects.

5. Recommendation

For self-study; Focus on iOS Data Structure and Mac file systems (APFS) as these are clearly high demand areas for the commission.
